

Stat 6502 wordcloud project

Find a text dataset and try make a wordcloud.

Learn about wordclouds from the following links that were giving Week 8. The easiest example is from the Kansas City R User Group.

<http://groupspaces.com/KCRUsersGroup/wiki/wordcloud>

You can get a text file and copy the words into docs in the code and that should be it.

If you would like to use another software package feel free.

Or if you are in a hurry try one of the following websites. Here you can get a text file and copy the words into webpage in the code and that should be it. Try WordItOut or Wordle, see the links given Week 10.

To be turned in a the project.

1. Description of the text document you used to make your wordcloud.
2. The code if you used R. Or the name of the website you used if you did not use R.
3. You wordcloud printed out.
