# CALIFORNIA STATE UNIVERSITY HAYWARD DEPARTMENT OF STATISTICS

## Statistics 4866/6871: Seminar - Introduction to Times Series Analysis Summer 2005

Lecture: MW 8:00-9:50, NSc 207

Instructor: Prof. Eric A. Suess Office Hours: MW 5-6pm NSc 319 eric.suess@csueastbay.edu www.sci.csueastbay.edu/~esuess/Statistics\_ 6871/sta6871.htm

## **Required Text:**

• Shumway and Stoffer: Time Series Analysis and Its Applications, Springer-Verlag, 2000

## **Recommended Text:**

- Bowerman, O'Connell, and Koehler: Forecasting, Time Series, and Regression, Duxbury, 2005
- Franses: Time series models for business and economic forecasting, Cambridge, 2000
- Krause and Olson: The Basics of S and S-Plus, Second Edition, Springer-Verlag, 2000

#### **Topics:**

In this course we will cover the fundamentals of Statistical Time Series analysis, the study of correlated random variables over time. Descriptive methods will be introduced to describe trends, seasonal patterns, and autocorrelation in time series data. Time Domain Methods of analysis such as Autoregression and ARIMA modeling will be presented. Frequency Domain Methods will also be covered. The class will be roughly split between the discussion of theory and computer applications of the methods to real data. Examples will come from such fields as Economics, Biology, Medicine, Seismology, and Engineering.

## Homework:

Weekly homework assignments will be assigned and collected on Mondays. The assignments will include problems from the textbook and will require the use of computer software.

## **Computers:**

The Windows software package provided by the authors, ASTSA, will be introduced and used for some of the introductory homework assignments. The time series options in Minitab and SPSS will be introduced. Splus and SAS will also be introduced and used to perform the statistical analyses in the homework.
